

EARTHSAVE™ Barrier Tape

**INNOVATIVE
DEGRADABLE
HIGH VISIBILITY**

Biodegradable barrier tape

And now for the science bit

EARTHSAVE™ is an innovative degradable plastic from UK Tapes Ltd. Once exposed to UV light, the polythene will start to degrade. Degradation continues in the dark and is accelerated by heat, making the product ideal for disposal in industrial landfill.

The degradation time depends on many factors, but it will take at least five to ten years for the tapes to fully disintegrate. Be wary of products claiming quicker degradation periods.

Do not attempt to recycle EARTHSAVE™ plastic.
