SUREFOOT™ : Application

Anti-slip safety tread tape

SUREFOOT™ is designed for use on floors or steps made from concrete, metal, wood, stone or painted surfaces.

It is essential that the tape is brought into a warm environment at room temperature prior to application.

For best results, use SUREFOOT™ primer & edge sealer

General Conditions

- ✓ The air & surface temperature should be a minimum of 10°C
- ✓ The floor/step surface should be clean, dry and relatively smooth
- ✓ All contaminants, such as dirt and loose particles, should be removed prior to application
- ✓ The tape will not adhere well to dirt or oil residues, or over painted markings that are loose or poorly adhered
- ✓ On porous surfaces, the floor/step should be primed before application

Instructions

- 1 Ensure that the area is clean, dry and free from dust, oil or contaminants
- 2 Apply a thin coating of primer with a paint brush
- 3 One litre of primer gives approximately 5M² of coverage
- 4 Allow primer to almost dry so that it will barely transfer when touched
- 5 Remove the backing paper from the tape
- 6 Unroll and apply the tape
- 7 Do not overlap the tape. Use butt joins only
- 8 If long lengths are being applied, score the material every 5 metres
- 9 Tamp the tape with a minimum pressure of 90kgs to ensure initial adhesive contact
- 10 Particular attention should be paid to the edges
- 11 For best results, apply a bead of edge sealer along the exposed edges of the tape

SURFACE PREPARATION PRIMER

For best results, we recommend primer is used for all SUREFOOT™ applications

Approx coverage:
1 litre = 5M²

REF	SIZE
UKT79PRIMER	1 litre tin

EDGE SEALER

For best results, we recommend that the leading edge of the SUREFOOT™ tape is sealed.

Approx coverage:
1 tube = 34 linear metres

REF	SIZE
UKT79EDGE	140ml tube

SUREFOOT™: Marine grade
